

Mathematical Modeling of EM Fields

1. Validating Spread Sheet Solutions to Laplace's Equation. F. X. Hart. *Amer. J. Phys.* 57, 1027-1034 (1989).
2. Using a Spread Sheet Program to Model the Interaction of Low Frequency Electric Fields with Inhomogeneous, Irregularly Shaped Objects. F. X. Hart. *J. Bioelec.* 8, 201-26 (1989).
3. Use of a Spread Sheet to Calculate the Current-Density Distribution Produced in Human and Rat Models by Low-Frequency Electric Fields. F. X. Hart. *Bioelectromagnetics* 11, 213-228 (1990).
4. Eddy Current Distributions: Their Calculation with a Spreadsheet and Their Measurement with a Dual-Dipole Antenna Probe. F. X. Hart and K. W. Wood. *Amer. J. Phys.* 59, 461-467 (1991).
5. Changes in the Electric Field at an Injury Site During Healing Under Electrical Stimulation. F. X. Hart. *J. Bioelec.* 10, 33-51 (1991).
6. Electric Fields Induced in Rat and Human Models by 60-Hz Magnetic Fields: Comparison of Calculated and Measured Values. F. X. Hart. *Bioelectromagnetics* 13, 313-316 (1992).
7. Numerical and Analytical Methods to Determine the Current Density Distributions Produced in Human and Rat Models by Electric and Magnetic Fields. F. X. Hart. *Bioelectromagnetics* 13 Suppl 1, 27-42 (1992).
8. The Use of a Spreadsheet Program to Calculate the Electric Field/Current Distributions Induced in Irregularly-Shaped Inhomogeneous Biological Structures by Low-Frequency

Magnetic Fields. F. X. Hart, K. Evely and C. D. Finch. Bioelectromagnetics 14, 161-172 (1993).

9. The Current Density Distribution Induced in a Two-Dimensional, Inhomogeneous Human Model by a Time-Varying Magnetic Field. F. X. Hart. In "Electricity and Magnetism in Biology and Medicine", ed. M. Blank, San Francisco Press, San Francisco, pp 572-574 (1993).

10. Spreadsheet Method for Calculating the Induced Currents in Bone-Fracture Healing by a Low-Frequency Magnetic Field. F. X. Hart. Bioelectromagnetics 15, 465-482 (1994).

11. Cell Culture Dosimetry for Low Frequency Magnetic Fields. F. X. Hart. Bioelectromagnetics 17, 48-57 (1996).

12. An Analytical Model for the Calculation of the Change in Transmembrane Potential Produced by an Ultrawideband Electromagnetic Pulse. F. X. Hart and C. E. Easterly. Bioelectromagnetics, 25, 251-9 (2004).

13. Effect of Cell Electroporation on the Conductivity of a Cell Suspension. M. Pavlin, M. Kanduser, M. Rebersek, G. Pucihar, F. X. Hart, R. Magjarevic and D. Miklavcic. Biophysical Journal, 88 4378-4390 (2005).

14. Integrins May Serve as Mechanical Transducers for Low-Frequency Electric Fields. F. X. Hart. Bioelectromagnetics, 27, 505-8 (2006).

15. Some Factors That May Determine the Frequency Response of Cells and Tissue to Applied Electrical and Mechanical Forces. F. X. Hart. Molecular and Cellular Biomechanics, 3, 235 (2006).

16. Glycoproteins Bound to Ion Channels Mediate Detection of Electric Fields: A Proposed Mechanism and Supporting

Evidence. O. V. Kolomytkin, S. Dunn, F. X. Hart, C. Frillot II, D. Kolomytkin, and A. A. Marino. *Bioelectromagnetics*, 28, 379-85, (2007).

17. The Mechanical Transduction of Physiological Strength Electric Fields. F. X. Hart. *Bioelectromagnetics*. 29, 447-55 (2008).

18. The Electric Field is a Sufficient Physical Determinant of the Human Magnetic Sense. S. Carrubba, C. Frilot II, F. X. Hart, A. L. Chesson Jr, A. A. Marino. *International Journal of Radiation Biology*. 85, 622-32 (2009).

19. Cytoskeletal Forces Produced by Extremely Low-Frequency Electric Fields Acting on Extracellular Glycoproteins. F. X. Hart. *Bioelectromagnetics*. 31, 77-84 (2010).

20. Investigation Systems to Study the Biological Effects of Weak Physiological Electric Fields. F. X. Hart. In "The Physiology of Bioelectricity in Development, Tissue Regeneration and Cancer", ed. C. Pullar. CRC Press; Boca Raton, FL (In Press 2011).
